

Task for Django Intern

In this Task, you are required to make Django based website with integration of Django Rest framework (Rest API).

You need to make a student entry system with unique ID, in this system admin can record new student details, delete the details and update it. You can use Django-form or simple HTML form for recording, deleting or updating the details of the student.

Model Description:

Model Name: Student

Fields:

1. Name
2. Age
3. Address
4. Grade
5. Major

Note: use the suitable datatype for the above fields.

Requirements:

1. Expose the model with Rest API in specific URL.
2. Implement the clean code and correct naming.
3. Make sure your project is using Virtualenv or pipenv.
4. Make your website run on "localhost" on port 8025.

Please, Zip the code files and submit in the given time.

Time duration: 24 hours

"We wish you best of luck"
